

ABSTRACT OF THE DISCLOSURE

5 A personal care article comprising a front portion, first and second lateral sections having inner edges releasably fastened to the front portion and first and second outer portions attached to the front portion, a back portion, and a crotch portion between the front portion and the back portion, Outer edges of the first and second lateral sections are secured to third and fourth side edges of the back portion to form a pant-like article having a waist opening, and first and second leg openings. Strength of the attachment of the outer portions of the lateral sections to the front portion is less than strength of securement of the outer edges of the lateral sections to the back portion, whereby the attachments of the outer portions of the lateral sections to the front portion can be separated from the front portion without separating securement of the first and second lateral sections from the side edges of the back portion.
